

## Why do I need a security assessment?

A security assessment from Winxnet provides an insightful view of your organization's security posture. Using proven assessment tools and methodologies, Winxnet will help you identify vulnerabilities and gauge your ability to defend against outside attacks.

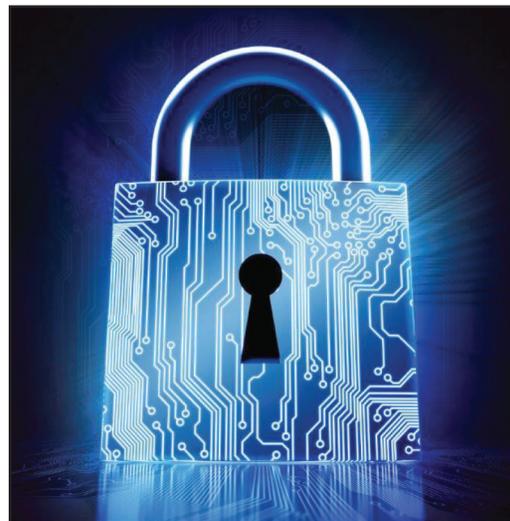

## Are you confident about your cybersecurity?

Every day we hear about new cyber attacks hitting large and small companies - nobody is immune. Leverage our experts and gain peace of mind.

**Does recent news on cybercrime keep you up at night? Are you worried about the confidentiality, integrity and availability of your organization's sensitive data? Would you like the peace of mind of knowing that you are doing what you need to keep risk to a minimum? Do you have a security program that helps you achieve your business objectives?**

## A Security Assessment will help your organization:

- Assess the overall strength of your Information security architecture
- Identify vulnerabilities on your internal networks
- Identify risk areas that need improvement
- Prioritize a list of corrective actions
- Reduce security risks and vulnerabilities

## What does a Security assessment involve?

Our certified security experts will perform the following activities as part of the assessment.

The Team will:

1. Conduct interview to review current security posture
2. Scan your network for vulnerabilities
3. Create a report including an executive summary of findings and recommendations, and a detailed scorecard showing security status for devices on your network

Winxnet is the leading provider of IT Managed Services for small and mid-size enterprises. Our mission is to become your trusted IT ally by helping your organization leverage the power of IT to achieve your goals. Since 1999, we have made IT management easy and secure for hundreds of corporations, healthcare organizations, non-profits, and public sector agencies.
